

Home Assignment – SQL Practice(EXP 5)

Question 1

Julia asked her students to create some coding challenges. Write a query to print the hacker_id, name, and the **total number of challenges created** by each student.

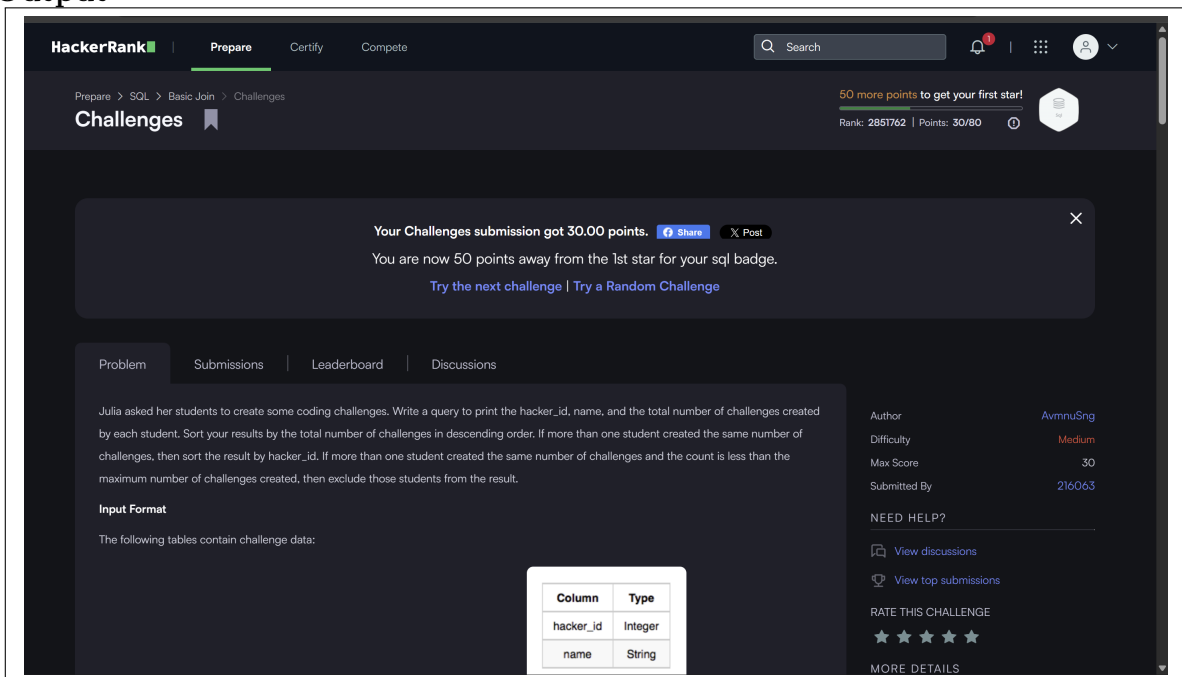

Sort your results by the **total number of challenges in descending order**. If more than one student created the same number of challenges, then sort the result by hacker_id.

If more than one student created the same number of challenges and the count is **less than the maximum number of challenges created**, then **exclude those students from the result**.

Answer

```
1 select h.hacker_id, h.name, count(c.challenge_id) as cnt
2 from hackers h
3 join challenges c
4 on c.hacker_id = h.hacker_id
5 group by h.hacker_id, h.name
6 having count(c.challenge_id) = (
7     select max(cnt)
8     from (
9         select count(challenge_id) as cnt
10        from challenges
11       group by hacker_id
12    ) x
13 )
14 or count(c.challenge_id) in (
15     select cnt
16     from (
17         select count(challenge_id) as cnt
18        from challenges
19       group by hacker_id
20    ) x
21     group by cnt
22     having count(*) = 1
23 )
24 order by cnt desc, h.hacker_id;
```

Output

The screenshot shows the HackerRank interface. At the top, there are tabs for 'Prepare', 'Certify', and 'Compete'. The 'Prepare' tab is active, and the 'Challenges' section is selected. A notification banner at the top states: 'Your Challenges submission got 30.00 points. You are now 50 points away from the 1st star for your sql badge.' Below this, there are tabs for 'Problem', 'Submissions', 'Leaderboard', and 'Discussions'. The 'Problem' tab is active, displaying the challenge description: 'Julia asked her students to create some coding challenges. Write a query to print the hacker_id, name, and the total number of challenges created by each student. Sort your results by the total number of challenges in descending order. If more than one student created the same number of challenges, then sort the result by hacker_id. If more than one student created the same number of challenges and the count is less than the maximum number of challenges created, then exclude those students from the result.' The 'Input Format' section shows a table with columns 'hacker_id' (Integer) and 'name' (String). On the right side, there is a sidebar with the author 'AvmnuSng', difficulty 'Medium', max score '30', and submitted by '216063'. There are also links for 'View discussions', 'View top submissions', and 'RATE THIS CHALLENGE'.

Question 2

You did such a great job helping Julia with her last coding contest challenge that she wants you to work on this one, too!

The **total score** of a hacker is the sum of their **maximum scores** for all of the **challenges**. Write a query to print the **hacker_id**, **name**, and **total score** of the hackers ordered by the **descending score**.

If more than one hacker achieved the same total score, then sort the result by **ascending hacker_id**.

Exclude all hackers with a **total score of 0** from your result.

Answer

```

1 select h.hacker_id, h.name, sum(x.max_score) as total_score
2 from hackers h
3 join (
4     select hacker_id, challenge_id, max(score) as max_score
5     from submissions
6     group by hacker_id, challenge_id
7 ) x
8 on h.hacker_id = x.hacker_id
9 group by h.hacker_id, h.name
10 having sum(x.max_score) > 0
11 order by total_score desc, h.hacker_id;

```
